

SECONDARY CONTAINMENT FOR TRANSPORT BETWEEN BUILDINGS

Secondary containment **MUST** be able to **contain** any liquid that may be within your primary container (schott bottle, falcons, eppendorfs, petri dishes or plates etc for example). Cardboard boxes are not suitable as they will not contain liquids.

When transporting biological or chemical substances between buildings **suitable secondary containment MUST be used**. You will not be admitted into the NDMRB unless your items are suitably contained.

With lid secured
